

Off-Grid Solar System for EV Charging with CyboInverter Quad Pack

- Pure Sinewave AC Output
- An Off-Grid Solar System to Produce 220V, 50Hz AC for EV Charging or Run Heavy Loads
- Total of 16 DC Input Channels
- MPPT for Each Solar Panel
- Over Discharge Protection for 48V Lead-Acid Batteries
- Solar or Battery Auto-Detection
- High Efficiency and Long Life

One Master (S1) and three Slave off-grid CyboInverters (2 x S3 and S2) can daisy-chain. The system can produce up to 5000W, 220V, 50Hz AC to perform EV charging and power other 220V AC loads. All input channels can connect to solar panels or batteries. Each 48V battery set can connect to 2 to 4 input channels in parallel to provide surge or needed power.

Key Benefits: When there is sufficient solar power to charge the EV or run the loads, the CyboInverters will not pull power from the battery. This ensures a much longer battery life.

Part No: CIM-5000S with Daisy-Chained CyboInverter S1, S3, S3, and S2.

Made in U.S.A.
